

HIQ Home & Building automation

HIQ is a system of integrated devices and software used for efficient, simple and logical building and home automation. The primary function of HIQ is the control and management of all devices, appliances and services, such as lights, blinds, heating, ventilation and cooling, security and safety. Furthermore HIQ enables advanced functions, such as energy management, surveillance system, comfort management, and others. We developed HIQ to be simple and reliable, with unlimited expansion and extension capability.
